An Informational Guide for Security Clients

Safety on the Road

During the holiday season the combination of weather, the time of year, and normal driving risk factors result in an increase in accidents. One common hazard is distracted driving. This can range from talking on the phone to texting, looking for a parking spot, trying to find a store, or watching the GPS. Any time driving is not the primary focus, the chance of being involved in an accident increases. Let nonessential tasks wait until the car is parked or ask a passenger to assist with those that can't. Holiday stress can also lead to dangerous driving. People are often in a hurry, trying to beat the rush, or finish last minute shopping. This can compel them to speed or take unnecessary risks. The pressure and stress of the holidays are shared by many, making this a good time to pay extra attention to your driving and be aware of the drivers around you.

Holiday Safety

The holiday season is here and with it comes the hustle and bustle of the shopping season. Crowded stores and increased traffic can bring out the rudeness in anyone, but is even more reason to pause and try to reinforce the holiday sentiment of good cheer by being kind and helpful to others. In this spirit, as you begin your holiday wrapping, Securitas would like to wrap up 2018 with a few holiday safety tips.

There are many seemingly insignificant steps we can take to protect ourselves and help ensure the safety of those around us at work, at home and while on the road. Taking a few precautions will help ensure a merry and joyous holiday with friends and family.

Safety in the Festive Workplace

Although they will vary by work location, some practical guidelines can help ensure the safety of all. Refrain from obstructing or obscuring fire extinguishers, fire alarms, and emergency or directional signage with holiday decorations. This can create an unnecessary risk for coworkers, clients, and visitors. End of the year office parties are another area for additional attention. These events can pose additional hazards and consideration must be given to everything from food served—to guard against allergic reactions—to the consumption of alcohol. The latter is one of the top concerns for most managers. Ensuring that coworkers either have

Bad weather also increases driving accidents. Allow sufficient travel time when driving in harsh weather conditions. Planning and patience could be the best approach to driving in inclement weather. Maintain a safe following distance to give yourself much needed reaction time. Other helpful strategies include using the time and pacing three seconds rule. Do this by identifying a fixed point down the road—such as a speed limit sign or overpass. When the car in front of you reaches that point, begin counting. If the car you are driving reaches that same location before you reach the specified number, you are following too close. The three seconds rule is recommended in clear, daytime weather driving. However, for night driving, heavy traffic, or inclement weather you should follow the six seconds rule. This increases the amount of reaction time with the car in front of you. If the weather is extremely poor and you lack a clear line of sight, increase the distance to nine seconds. This will provide some of the longest times and distances to react, in the event the car you are following makes a sudden change of speed or direction.

a designated driver or a cab ride home can help prevent a tragedy. Additionally, drinking responsibly will also protect you and your coworkers from embarrassing situations that could reflect negatively on you and possibly lead to termination. Even though it is a social setting, make sure you are following all company rules and policies.

Safety in the Holiday Home

A home fire is a frightening event, and the danger of having one increases during the holidays. An average of 210 structure fires occur each year from Christmas trees alone. Both natural and artificial trees pose potential hazards. Inness of a natural tree and the certification of an artificial tree. Tree placement, types of lights used, and using a timer or remembering to turn off tree lights when going to bed or leaving the house can all reduce the risk of a tree fire. Do not plug multiple extension cords into one outlet. This can overload the circuit and cause a fire risk.

There are additional home safety concerns during the holidays. The FBI reports that approximately 400,000 home burglaries occur between the months of November and December. Pay attention to what you throw away. Empty computer and television boxes may draw the attention of would-be thieves. Packages under the tree can also look appealing and make easy targets when viewed through the window. Finally, use caution when posting to social media if you spend the holidays away from home. Drawing attention to the fact that your house is unoccupied can make it a target. A common-sense approach will help protect you and your family.

Our Values, Our Gift

Embracing tolerance and safety in your personal and professional spaces can help spread joy during the holidays. Practice giving the gifts of tolerance and safety to everyone throughout the year. We encourage our employees, clients and the public to adopt and promote these behaviors. Securitas believes this can be done by practicing our corporate values of Integrity, Vigilance, and Helpfulness. Our values are our gift. In this spirit, we wish you and your family a joyous and safe holiday season...

See you in 2019!
